

Chapter 4 Laser Cooled Atomic Physics		
Electostatic Focussing of Laser-Cooled Atoms (abstract)	Juris G. Kalnius, Glen Lambertson, and Harvey Gould Lawrence Berkeley National Laboratory	4-2
Measurement of G with an atom interferometer-based gravity gradiometer	Greg Foster, Jeff Fixler, and Mark Kasevich Yale University	4-3
Experiment to measure the Electric Dipole Moment of the Electron (abstract)	Daniel Heinzen University of Texas at Austin	4-34
RACE, Distributed Cavity Phase Shifts, and Microwave Photon Recoils	Chad Fertig, Ruoxin Li, J. Irfon Rees, and Kurt Gibble Pennsylvania State University	4-36
Atom-atom collisions in a very dense Bose-Einstein condensate (abstract)	Juha Javanainen University of Connecticut	4-43
All-Optical Trapping and Cooling of a Two-Component Fermi Gas	John Thomas, Ken O'Hara, Michael Gehm, Stephen Granade, and Staci Hemmer Duke University	4-44
Magnetism in a lattice spinor Bose condensate (abstract)	K. Gross, C. P. Search, H. Pu, W. Zhang, and P. Meystre University of Arizona	4-75
Towards Testing Fundamental Physics with Ultracold Bosons and Fermions	Kai Dieckmann, Wolfgang Ketterle, and Dave Pritchard MIT	4-76
Single Laser-Cooled Ion trapping at the University of Washington (abstract)	Warren Nagourney University of Washington	4-105
High-order Inertial Force Phase Shifts for Microgravity Optical Clocks and Inertial Sensors	Kai Bongs, Romain Launay, and Mark Kasevich Yale University	4-107
PARCS Challenges	D. B. Sullivan NIST-Boulder	4-121
Quantum Phase Separation Dynamics of BEC Mixtures (abstract)	S. T. Chui University of Deleware	4-142
High-Density Trapped Atoms in a Holographic Atom Trap	T. G. Walker, R. Newell, J. Sebby, and M Saffman University of Wisconsin-Madison	4-143
Tunable Interactions in Bose and Fermi Gases	K. S. Strecker, A. Truscott, and R. G. Hulet Rice University	4-147
